

Take the next step in your career as an experienced **Fullstack Developer (Java + Angular)** and build scalable systems within a modern microservices architecture. In this role, you will drive the development of advanced backend services and seamless UIs, leveraging cloud technologies (AWS) and real-time data streaming via Kafka. A stable project, extensive training and certification opportunities, and a flexible hybrid work model in major Polish cities await you.

Fullstack Developer (Java + Angular)

Nr ref.: 10/6/2026/MD/268845/jobs.pl Wrocław (dolnośląskie)

What we offer

- **stable employment:** Long-term cooperation based on a **permanent employment contract** (*umowa o pracę*)
- **flexible hybrid work:** A balanced model requiring **2-3 days a week from office** (available in **Wrocław** or **Warsaw**), with the rest of the week worked remotely
- **home office setup:** To support your remote days, we provide a **full ergonomic package**, including a laptop, an additional monitor, and a professional office chair
- **continuous growth & certifications:** Access to a platform featuring over 70 training tracks and opportunities to earn industry-recognized certifications (e.g., **GenAI, Cloud Architect, Google**). You will also enjoy free access to top educational platforms: Udemy Business, Coursera, Pluralsight, and the Education First language platform
- **comprehensive healthcare:** Private medical care with **Medicover**, including the option to add specialized packages (dental, oncology, senior care) on highly preferential terms, as well as life insurance
- **sports & entertainment:** Over 40 benefits to choose from in a flexible cafeteria system. You decide how to allocate your points—options include sports cards, or subscriptions to Netflix, Spotify, and much more

Employment agency entry number 47

this job offer is intended for people over 18 years of age

Your tasks

- **lead the design and development of user interfaces** using frameworks like Angular
- **architect and maintain robust RESTful APIs** with Java and Spring technologies, ensuring smooth data flow between front and backend services
- **implement and optimize frontend and backend code** for performance and scalability, ensuring systems are built to last
- **collaborate with DevOps teams** on deployment and CI/CD pipeline management, contributing to efficient and reliable development cycles
- **collaborate with cross-functional teams** of designers, product managers, and developers to understand requirements and drive feature development
- **manage complex bug fixes**, ensuring the stability and security of applications at all times

What we expect

- minimum **6 years** of experience as a **Java developer**
- proven hands-on experience with **Spring and Spring Boot**,
- minimum **3 years** experience in front-end including **Angular, TypeScript, RxJS, (NgRx)**
- solid understanding of **UI/UX principles**
- experience with **DevOps tools** and practices - Docker, Kubernetes, Jenkins, and AWS
- advanced understanding of tools like **Maven, JUnit, REST API design, design patterns, and databases** such as MongoDB and PostgreSQL
- strong knowledge of **microservices architecture** and event-driven architectures, with experience in data streaming using Kafka
- familiarity with monitoring and **code quality tools** such as SonarQube and experience with infrastructure-as-code and deployment automation (Helm, Istio)
