RESPONSIBILITIES

- Own and develop the master data strategy, governance framework and operating model across parts and supplier data domains.
- Lead, coach and develop the master data team, setting priorities, delegating responsibilities

and building sustainable capability.

- Establish data quality standards, service levels and performance measures, and report progress, risks and corrective actions to leadership.
- Ensure master data processes comply with internal controls, audit requirements, applicable
regulations and customer expectations.
- Prioritize cross-domain technology and configuration requirements based on business impact, operational risk and governance needs.
- Build effective partnerships across Supply Chain, Finance, IT, Operations, Asset Integrity, Projects, Compliance and other key functions.
- Sponsor continuous improvement, digitalization and automation initiatives that improve data
quality, process efficiency and user experience.
- Oversee data lifecycle management, including cleansing, duplicate prevention, maintenance,
deactivation and remediation of quality issues.
- Identify and mitigate operational, compliance and business-continuity risks related to parts
and supplier master data.
- Provide clear governance decisions and resolve escalations that cannot be addressed within
the operational teams.

Czego możesz od nas oczekiwać?

- Work is primarily performed in an office or hybrid environment.
- Collaboration across international locations and time zones is required.
- Business travel is required as needed.
